General Description

The ICEpower125ASX2 is fully integrated, intelligent audio power conversion solution designed particularly for highly competitive consumer and professional audio products. The ICEpower125ASX2 is EMC and safety approved and the "black-box" completeness allows for fast design-in and minimized time to market. Key benefits include:

- State-of-the-art, high efficiency ICEpower amplification stage based on the patented HCOM modulation and MECC control techniques
- An ICEpower Supply with selectable mains converter and separate aux converter.
- A wide set of features for plug-and play implementation into applications such as active speakers and subwoofers, wireless speakers, multimedia audio, musical instrument amplifiers and distributed audio.

The ICEpower125ASX2 can be configured to either stereo or mono output. Combined with the auxiliary supply for powering external circuitry and the complete elimination of external heat sinks and EMI shields; the ICEpower125ASX2 is the natural choice in any audio application that requires a compact, integrated power solution.

The ICEpower125ASX2 is protected against short circuits, overload and over heating and includes on-board fuses and EMI filtering to provide a CE and FCC pre-approved design.

Key Specifications

- 450W @ 1% THD+N, 20Hz – 20kHz, 4Ω, BTL
- 2 x 120W @ 1% THD+N, 20Hz – 20kHz, 4Ω, SE (both channels driven)
- 121dBA dynamic range (BTL-mode)
- 117dBA dynamic range (SE-mode)
- THD+N = 0.002% @ 1W (8Ω,1kHz, SE-mode)
- THD+N = 0.002% @ 1W (8Ω,1kHz, BTL-mode)
- 86,4 % total efficiency @ 250W, 8Ω
- CCIF Intermodulation distortion = 0.0009%, 10W, 4Ω, 18.5kHz/1kHz
- ±25V unregulated auxiliary power supply
- Selectable Mains 85-132V_{AC} & 170-264V_{AC}

Key Features

- Fully integrated audio power solution
- Rugged construction
- Thermal protection
- Over current protection
- Sound optimized soft clipping
- Suitable for CE approved designs
- EMI conforms to: EN55013
EN55020
EN61000-3-2
EN61000-3-3
FCC part 15-B
- Safety conforms to: IEC 60065 7th ed.
UL 60065 7th ed.

Block Diagram

Connection Diagram

Figure 2: ICEpower125ASX2 connections

The connector interface of the ICEpower125ASX2 module has four industry standard connectors selected for long term reliability.

AC Header Specifications (P100)

Type: JST B2P3-VH			
PIN	Function	Description	Type
1	Live	Live AC	Input
2	Neutral	Neutral AC	Input

Table 1: AC connector specifications.

Speaker Header Specifications (P101)

Type: JST B4P-VH			
PIN	Function	Description	Type
1	Vo+	Amplifier output channel 2	Output
2	GND	GNDchannel2	GND
2	GND	GNDchannel1	GND
4	Vo+	Amplifier output channel 1	Output

Table 2: Speaker connector specifications.

Signal Header Specifications (P102)

Type: JST B8B-PH-K-S			
PIN	Function	Description	Type
1	BTL Sync	Synchronization pin for amplifiers (used in BTL-mode)	Input
2	Enable	Amplifier enable	Input/Output
3	OC	Monitor pin amplifier over current	Output
4	Thermal	Thermal monitoring pin	Output
5	Vin channel 2	Input signal channel 2	Input
6	GND	Ground terminal for the signal section.	GND
7	GND	Ground terminal for the signal section.	GND
8	Vin channel 1	Input signal channel 1	Input

Table 3: Signal connector specifications.

Auxiliary Supply Header Specifications (P103)

Type: JST B3B-PH-K-S			
PIN	Function	Description	Type
1	Vdaux	Positive unregulated auxiliary supply (typical +24V)	Output
2	GND	Ground terminal for the auxiliary section.	GND
3	Vsaux	Negative unregulated auxiliary supply (typical -24V)	Output

Table 4: Auxiliary supply header specifications.

Absolute Maximum Ratings

Absolute maximum ratings indicate limits above which damage may occur.

Mains Input Section

115V mains setting

Symbol	Parameter	Value	Units
AC_{max}	Maximum off-line voltage	132	V_{AC}
AC_{min}	Minimum off-line voltage	85 ¹⁾	V_{AC}
F	Mains frequency range 85VAC - 132VAC	45 – 65	Hz

Table 6: Absolute maximum ratings, mains input section - 115V setting.

230V mains setting

Symbol	Parameter	Value	Units
AC_{max}	Maximum off-line voltage	264	V_{AC}
AC_{min}	Minimum off-line voltage	170 ¹⁾	V_{AC}
F	Mains frequency range 170V _{AC} - 264V _{AC}	45 – 65	Hz

Table 7: Absolute maximum ratings, mains input section - 230V setting.

2) The ICEpower125ASX2 will operate at lower levels but the output power will be reduced. If the off-line voltage is too low the ICEpower125ASX2 will switch off.

Auxiliary Supply

Symbol	Parameter	Value	Unit
I_{Vd}	Maximum current draw from Vd (+24V) ²⁾	250	mA
I_{Vs}	Maximum current draw from Vs (-24V) ²⁾	-250	mA

Table 8: Absolute maximum ratings, auxiliary supply.

2) If the auxiliary supply on the ICEpower125ASX2 is used with a capacitive load please remember to read the section "Capacitive Loading of the AUX Supply" in the ICEpower125ASX2 Designer's Manual.

Input Section

Symbol	Parameter	Value	Unit
Vin channel 1 , Vin channel 2	Maximum voltage range on pin	±3.3	Vp

Table 9: Absolute maximum ratings, input section.

Output Section

Symbol	Parameter	Value	Units
Rload	Minimum symmetric load (SE-mode)	3	Ω
	Minimum asymmetric load (SE-mode) *	2 & 6	Ω
	Minimum load (BTL-mode)	3	Ω
Iout3)	Maximum current draw from amplifier output	30	A
CL	Maximal purely capacitive load (SE)	390	nF
	Maximal purely capacitive load (BTL)	220	nF

Table 10: Absolute maximum ratings, output section.

**) The amplifier can be loaded asymmetrically. One channel can be loaded with minimum 2 Ω . The other channel must then be minimum 6 Ω
3) The over current protection will act to protect the amplifier. (See "Protection features")*

Thermal Section

Symbol	Parameter	Value	Unit
T _a	Max. operating ambient temperature (tropical conditions)	50	$^{\circ}\text{C}$

Table 11: Absolute maximum ratings, thermal section.

Power Specifications

Unless otherwise specified. $T_a=25^{\circ}\text{C}$, $f=1\text{kHz}$, $R_L=4\Omega$, 230V mains

Symbol	Parameter	Conditions	Min	Typ	Max	Units
$t_{P_{max}}$	Time of maximum rated output power ⁴⁾	400W out. No preheating.	-	80	-	s
P_T	Continuous output power ⁴⁾ without thermal shutdown. (SE, 4Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$. Both channels driven	-	65	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (SE, 8Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$. Both channels driven	-	70	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (BTL, 4Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	70	-	W
P_T	Continuous output power ⁴⁾ without thermal shutdown. (BTL, 8Ω)	Thermal stab. @ $T_a = 25^{\circ}\text{C}$.	-	200	-	W
P_{SMPS}	Quiescent power consumption (amplifier disabled)	Enable pin low	-	6	-	W
P_q	Quiescent power consumption (amplifier enabled)	$P_o = 0\text{W}$	-	9,5	-	W
η	Total power efficiency	$P_o = 100\text{W } 4 \text{ ohm}$ $P_o = 400\text{W } 4 \text{ ohm}$ $P_o = 500\text{W } 4 \text{ ohm}$ $P_o = 250\text{W } 8 \text{ ohm}$	-	75 80,4 81,4 86,4	-	%
$V_{d_{aux}}$, $V_{S_{aux}}$	Nominal DC voltage	Mains voltage and output power within specified ranges	$\pm 17,5$	± 24	± 28	V

Table 12: Power specifications.

4) The module is mounted vertically in free air.

General Audio Specifications (SE-mode)

Unless otherwise specified, $f=1\text{kHz}$, $P_o=1\text{W}$, $T_a=25^{\circ}\text{C}$.

Symbol	Parameter	Conditions	Min	Typ	Max	Units
P_o	Output power @ 1%THD+N 20Hz < f < 20kHz, both channels driven. (AES17 measurement filter) ⁶⁾	$R_L = 4\Omega$ 230V _{ac} / 50Hz, 115V _{ac} / 50Hz	-	120 105	-	W
P_o	Output power @ 10%THD+N 20Hz < f < 20kHz, both channels driven. (AES17 measurement filter) ⁶⁾	$R_L = 4\Omega$ 230V _{ac} / 50Hz, 115V _{ac} / 50Hz	-	150 130	-	W
P_o	Output power @ 1%THD+N 20Hz < f < 20kHz, one channel driven. (AES17 measurement filter) ⁶⁾	$R_L = 4\Omega$ 230V _{ac} / 50Hz, 115V _{ac} / 50Hz	-	130 120	-	W
THD+N	THD+N (4Ω , AES17 measurement filter) ⁶⁾	$f = 100\text{Hz}$, $P_o = 1\text{W}$	-	0.003	0.01	%
$V_{N,0}$	Output referenced idle noise	A-weighted	20	30	80	μV
A_v	Nominal Voltage Gain	$f = 1 \text{ kHz}$	24,3	24,8	25,3	dB
f	Frequency response	20Hz - 20kHz, All loads	-	± 0.15	± 0.5	dB

f_u	Upper bandwidth limit (SE) (-3dB)	$R_L = 8\Omega$ $R_L = 4\Omega$	- -	120 90	- -	kHz kHz
f_l	Lower bandwidth limit (-3dB)	$R_L = \text{All loads}$	-	1.5	-	Hz
Z_o	Abs. output impedance	$f = 1\text{kHz}$	-	18	25	$m\Omega$
Z_L	Load impedance range		3*	4	∞	Ω
D	Dynamic range	A-weighted (125W, 4 Ω)	-	117	-	dB
IMD	Intermodulation (CCIF)	$f = 18.5\text{kHz}, 1\text{kHz}, P_0 = 10\text{W}$	-	0.0009	-	%
TIM	Transient intermodulation (DIM30)	$P_0 = 10\text{W}$	-	0.007	-	%

Table 13: General audio specifications.

**) The amplifier can be loaded asymmetrically. One channel can be loaded with minimum 2 Ω . The other channel must then be minimum 6 Ω*

6) An Audio Precision AES17 20 kHz 7th order measurement filter is used for measurements. The frequency 6.67 kHz corresponds to the worst-case scenario where both 2nd and 3rd harmonics are within the audio band.

General Audio Specifications (BTL-mode)

Unless otherwise specified, $f=1\text{kHz}$, $P_0=1\text{W}$, $T_a=25^\circ\text{C}$.

Symbol	Parameter	Conditions	Min	Typ	Max	Units
P_0	Output power @ 1%THD+N 20Hz < f < 20kHz (AES17 measurement filter) ⁶⁾	$R_L = 4\Omega$ 230V _{ac} /50Hz, 115V _{ac} /50Hz	- -	450 370	- -	W
P_0	Output power @ 10%THD+N 20Hz < f < 20kHz (AES17 measurement filter) ⁶⁾	$R_L = 4\Omega$ 230V _{ac} /50Hz, 115V _{ac} /50Hz	- -	550 450	- -	W
THD+N	THD+N in 4 Ω (AES17 measurement filter) ⁶⁾	$f = 100\text{Hz}, P_0 = 1\text{W}$	-	0.003	0.005	%
$V_{N,0}$	Output referenced idle noise	A-weighted 20Hz < f < 20kHz	25	35	80	μV
A_V	Nominal Voltage Gain	$f = 1\text{kHz}$	29,7	30,7	31,7	dB
f	Frequency response	20Hz - 20kHz, All loads	-	± 0.3	± 0.7	dB
f_u	Upper bandwidth limit (BTL) (-3dB)	$R_L = 8\Omega$ $R_L = 4\Omega$	- -	100 70	- -	kHz kHz
f_l	Lower bandwidth limit (-3dB)	$R_L = \text{All loads}$	-	1.5	-	Hz
Z_o	Abs. output impedance	$f = 1\text{kHz}$	-	18	30	$m\Omega$
Z_L	Load impedance range		3	4	∞	Ω
D	Dynamic range	A-weighted at 500W@4 Ω	-	121	-	dB
IMD	Intermodulation (CCIF)	$f = 18.5\text{kHz}, 1\text{kHz}, P_0 = 10\text{W}$	-	0.0003	-	%
TIM	Transient intermodulation (DIM30)	$P_0 = 10\text{W}$	-	0.006	-	%

Table 14: General audio specifications.

6) An Audio Precision AES17 20 kHz 7th order measurement filter is used for measurements. The frequency 6.67 kHz corresponds to the worst-case scenario where both 2nd and 3rd harmonics are within the audio band.

Electrical Specifications

Unless otherwise specified, $T_a=25^{\circ}\text{C}$.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
f_o	Switching frequency channel 1	Idle	490	540	590	kHz
f_o	Switching frequency channel 2	Idle	450	500	550	kHz
f_o	Switching frequency BTL	Idle	490	540	590	kHz
f_s	Switching frequency range (amplifier)	Idle to full scale	90	-	590	kHz
f_{smps}	Switching frequency (power supply)		-	100	-	kHz

Table 15: Electrical specifications.

Timing Specifications

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
t_{acd}	Power supply start-up delay. (nominal mains)	Time from reaching AC_{min} to all power supplies are good and amplifier is active.	-	600	1000	ms

Table 16: Timing specifications.

Disturbances on the Mains

The signal on the mains connection is often very noisy and large surge voltages are present. The ICEpower125ASX2 is equipped with mains filtering to suppress surges and noise.

Special care and component selection has made the ICEpower125ASX2 able to withstand surges up to 8kV, to avoid damage to the ICEpower125ASX2 in case of surges caused by lightning.

Mechanical Specifications

The ICEpower125ASX2 has passed tough mechanical tests during development to ensure high reliability.

Test	Acceleration	Amount
Unpowered tests: The unit is powered after the test to verify functionality.		
Random vibration	$2g_{\text{RMS}}$	3x20min
Bump	10g/16ms, 2-4 Hz	1000 bumps in each of 6 directions ⁷⁾
Shock	70g/12ms	3 shocks in each of 6 directions ⁷⁾
Powered tests: The unit is tested with power applied.		
Sinusoidal vibrations	2.5mm, 5-10Hz 1g, 10-100Hz	2 hours in each of 3 directions ⁷⁾
Random vibrations	0.01g, 10-20Hz $0.7g_{\text{RMS}}$ -3dB/oct, 20-150Hz	2 hours in each of 3 directions ⁷⁾

Table 17: Mechanical tests.

⁷⁾ 6 directions: (up, down, left, right forward and backward). 3 directions: (up and down, left and right, forward and backward)

Typical Performance Characteristics

Frequency Response (SE-mode)

Frequency Response (BTL-mode)

Figure 4: Frequency response in 4Ω (blue), 8Ω (green) and open load (red). Top – amplitude. Bottom – phase.

Harmonic Distortion & Noise (SE-mode)

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz 8) (8Ω), 230Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz 8) (4Ω), 230Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz 8) (8Ω), 115Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz 8) (4Ω), 115Vac/50Hz

Idle noise (16K FFT). Residual = 30μV(A).
(Relative to 125W into 4 ohm)

f = 5kHz. Po = 100mW. 4Ω loading.
(Relative to 125W into 4 ohm)

Figure 5: Total harmonic distortion & noise (SE).

8) An Audio Precision AES17 20 kHz 7th order measurement filter is used for measurements. The frequency 6.67 kHz corresponds to the worst-case scenario where both 2nd and 3rd harmonics are within the audio band.

Harmonic Distortion & Noise (BTL-mode)

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz⁸⁾ (8Ω), 230Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz⁸⁾ (4Ω), 230Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz⁸⁾ (8Ω), 115Vac/50Hz

THD+N vs. Po at 100Hz, 1kHz and 6.67kHz⁸⁾ (4Ω), 115Vac/50Hz

Idle noise (16K FFT). Residual = 35µV(A).
(Relative to 400W into 4 ohm)

f = 5kHz. Po = 100mW. 4Ω loading.
(Relative to 400W into 4 ohm)

Figure 6: Total harmonic distortion & noise (BTL).

8) An Audio Precision AES17 20 kHz 7th order measurement filter is used for measurements. The frequency 6.67 kHz corresponds to the worst-case scenario where both 2nd and 3rd harmonics are within the audio band.

Intermodulation Distortion (CCIF & TIM) (SE-mode)

CCIF IMD vs. P_0 , $R_L = 4\Omega$, $f_1 = 18.5\text{kHz}$, $f_2 = 1\text{kHz}$,
IMD@10W = 0.002%.

CCIF IMD analysis. $R_L = 4\Omega$, $P_0 = 10\text{W}$.

TIM vs. output power. $R_L = 4\Omega$,
TIM@10W = 0.004%

TIM FFT analysis. $R_L = 4\Omega$, $P_0 = 10\text{W}$.

Figure 7: Intermodulation distortion (SE)

Intermodulation Distortion (CCIF & TIM) (BTL-mode)

CCIF IMD vs. P_O , $R_L = 4\Omega$, $f_1 = 18.5\text{kHz}$, $f_2 = 1\text{kHz}$,
 $\text{IMD}@10\text{W} = 0.0003\%$.

CCIF IMD analysis. $R_L = 4\Omega$, $P_O = 10\text{W}$.

TIM vs. output power. $R_L = 4\Omega$,
 $\text{TIM}@10\text{W} = 0.006\%$

TIM FFT analysis. $R_L = 4\Omega$, $P_O = 10\text{W}$.

Figure 8: Intermodulation distortion (BTL).

Power vs. Frequency

The maximum allowable short-term output power of the ICEpower125ASX2 is frequency-dependant due to the compensating Zobel network in the output stage. The short-term output power is defined as the maximum undistorted (THD+N < 1%) output power until thermal shutdown occurs. The maximum Full Power Bandwidth is 20 kHz. Above this frequency the Zobel protection circuit may briefly shut down the amplifier to protect the Zobel network from damage.

Note that this limitation will never cause problems when the amplifier is fed a music signal at the input, but the limit must be taken into consideration when the amplifier is tested under laboratory conditions using sine waves or noise signals.

Output Impedance

The output impedance is measured by feeding $1A_{RMS}$ into the output of the amplifier and measuring the voltage on the output. The voltage then corresponds to the output impedance. The output impedance is measured directly on the terminals on the PCB.

The figure below shows the output impedance from 100Hz – 20kHz BTL-mode (left) and for one channel in SE-mode (right).

Figure 9: Measured voltage at output terminals while feeding $1A_{RMS}$ into the output of the amplifier at PCB.

Loading

With its low output impedance, the ICEpower125ASX2 is designed to be unaffected by loudspeaker loading characteristics. However, care should be taken with *purely* capacitive loads.

Traditionally amplifiers have been tested extensively in laboratories with purely capacitive loads. This was done to test the amplifier's stability and performance but it does not relate to any normal speaker load as even electrostatic speakers do not present a purely capacitive load to the amplifier but include a resistive part as well. The maximum purely capacitive load allowed is 390nF per channel in SE-mode or 220nF in BTL-mode.

Dissipated Power vs. Output Power

SE-version

Mains Voltage V_{IN} : 115V/50Hz

<i>SE-version</i>	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power (both channels) [W]	Dissipated power [W]
Idle			9		9
1/8 rated power (pink noise)	4	105	42	2 x 13	16
1/8 rated power (pink noise)	8	60	26	2 x 7,5	11
Continuous output power	4	65	167	2 x 65	37
Continuous output power	8	70	165	2 x 70	25

Mains Voltage V_{IN} : 230V/50Hz

<i>SE-version</i>	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power (both channels) [W]	Dissipated power [W]
Idle			9		9
1/8 rated power (pink noise)	4	120	47	2 x 15	17
1/8 rated power (pink noise)	8	70	29	2 x 9	11
Continuous output power	4	65	164	2 x 65	34
Continuous output power	8	70	160	2 x 70	20

Table 18: Dissipated power vs. Output power (SE).

BTL power dissipation

Mains Voltage VIN: 115V/50Hz

<i>BTL-version</i>	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power [W]	Dissipated power [W]
Idle			9		9
1/8 rated power (pink noise)	4	370	68	46	22
1/8 rated power (pink noise)	8	220	40	27,5	12,5
Continuous output power	4	70	98	70	28
Continuous output power	8	200	239	200	39

Mains Voltage VIN: 230V/50Hz

<i>BTL-version</i>	Load impedance [Ω]	Rated power [W]	Line power [W]	Output power [W]	Dissipated power [W]
Idle			9		9
1/8 rated power (pink noise)	4	450	80	56	24
1/8 rated power (pink noise)	8	250	45	31	14
Continuous output power	4	70	97	70	27
Continuous output power	8	200	234	200	34

Table 19: Dissipated power vs. Output power (BTL).

Features

The ICEpower125ASX2 has a number of useful features described below.

Over Current monitor pin

Figure 10 shows the internal circuit of the OC pin interface. This pin is high (+5V) during normal operation but it is pulled low (0V) if a short circuit is detected on the speaker output terminals.

This pin is also activated by other protection features such as Zobel protection, saturation detection and DC protection on the output. If any of these protection features are activated, the pin will be pulled low (0V). This pin is only an output.

Figure 10: Over Current monitor pin interface

Thermal monitor pin

Figure 11 shows the internal circuit of the thermal pin interface. This pin is high (+5V) under normal conditions. If the amplifier temperature becomes too high the pin is pulled low (0V). This can happen if the continuous power drawn from the amplifier exceeds the limits listed on p. 6 and p. 7. This pin is only an output

Figure 11: Thermal monitor pin interface.

Enable pin

The enable pin can enable/disable the amplifier. If the pin is left unconnected then the level is high (+5V), and the amplifier is enabled. If the pin is pulled low (0V) externally, the amplifier will be disabled.

The enable pin will also be pulled low by the internal protection circuitry if the amplifier temperature becomes too high or a mains under-voltage is detected. This pin is bidirectional.

Figure 12: Enable pin interface.

BTL Sync pin

The BTL synchronization pin is used when the amplifier is operated in BTL mode. When the amplifier is used in BTL mode, the BTL sync pin must be pulled low (0V). By setting the BTL sync pin low it is ensured that the switching frequencies of the two separate amplifier channels are tied closely together for optimized THD performance.

Figure 13: BTL sync pin interface

Auxiliary power supply

The auxiliary supply can be used to power an external circuit such as a preamplifier or an equalizer/crossover. Remember that this supply is unregulated.

When using this AUX supply, please remember to read the sections "Shielding and Grounding of Audio Signals" and "Capacitive Loading of the Aux Supply" in the ICEpower125ASX2 Designer's Manual.

NOTE:

The Vd and Vs outputs are fused. Even brief overloads or short circuits will blow the fuse!

The fuse on the module is a 630mA type to keep the inrush-current from blowing the fuse, but the maximum current draw (sum of current from Vd,aux and Vc,aux) should never exceed 500mA.

Figure 14: Auxiliary supply equivalent diagram.

Protection Features

The ICEpower125ASX2 is equipped with several protection features for surviving overload without damage. The block diagram below illustrates the different protection features.

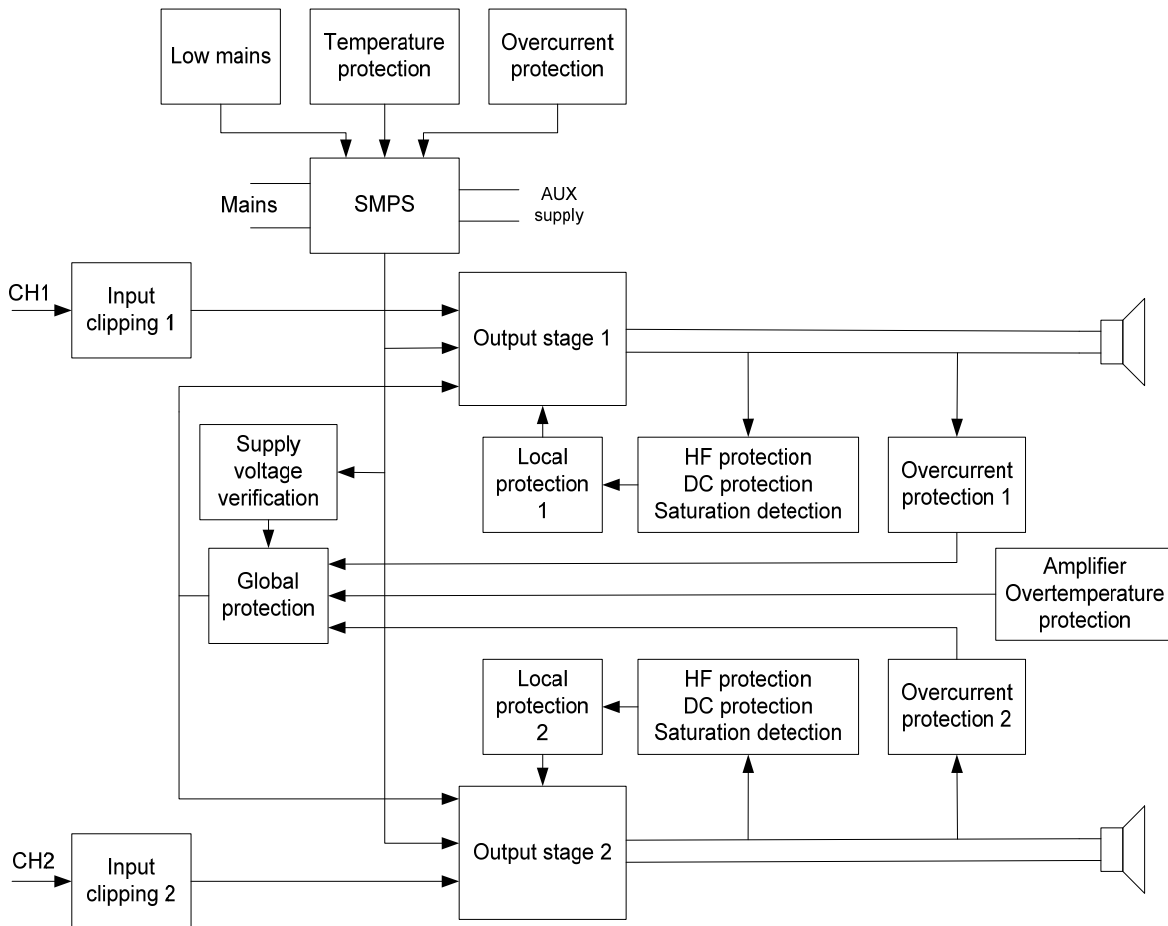

Figure 15: Protection schematic

Power Supply Protection

The power supply of the ICEpower125ASX2 has 2 protection circuits; over temperature and over current.

The temperature protection will be activated if the absolute temperature of the circuit is too high. This can be caused by high ambient temperature, high load (amplifier and AUX supply) for a long time or a combination of these two parameters.

The over current protection will be activated if the output current to amplifier and/or AUX exceeds the limits. Please remember that the AUX supply is protected by a fuse which will blow if the supply is overloaded.

DATASHEET
ICEpower125ASX2

Version 1.1

If one of these protection features is triggered, the power supply either limits its output power or shuts down. In case of a shut down the power supply will rapidly try to restart if the circuit's temperature is acceptable.

Amplifier Local Protection

The ICEpower125ASX2 has a local protection circuit for each of the two audio channels. This local protection handles HF protection, DC protection and saturation detection. If one of these protection features is activated on one channel it will only influence the channel where the error occurred.

The HF protection circuit is implemented to protect the Zobel network against ultrasonic signals (greater than 20kHz). This protection circuit has a built-in time constant, so it is possible to deliver a high frequency, high amplitude signal for a short time.

Amplifier Global Protection

There are two global protection features in the ICEpower125ASX2 amplifier; an over temperature protection and an over current protection.

The over temperature protection will only occur if the P_{RMS} is greater than the specified Continuous Output Power. In normal use the amplifier will not shut down if properly mounted.

The over current detection circuit is included in the ICEpower chipset by detecting saturation of the control system. This condition will typically be allowed for 100ms to 500ms which is enough to avoid accidental shutdown at peak currents during high music output. The current limit is set to 30A.

Input/Output Interface

Input Stage

The single ended input buffer has an anti-aliasing filtering and a DC blocking capacitor. The input impedance of the signal input section is minimum $8k\Omega$ over the audio bandwidth, which is an acceptable loading condition for pre-amps, active crossover outputs etc.

Figure 16: Single ended input buffer.

BTL module setup

When using the BTL module the wiring diagram on fig. 17 should be followed. For optimized THD performance the BTL sync pin is pulled low.

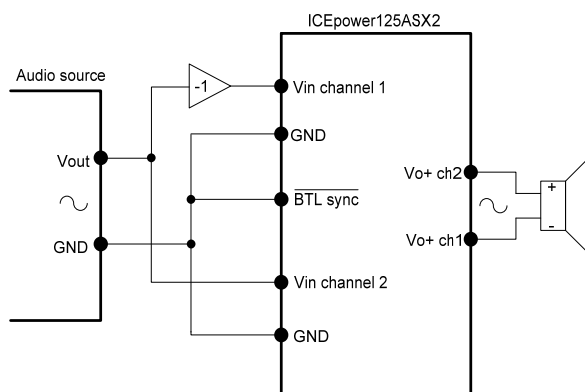

Figure 17: Wiring diagram for the BTL module

Output stage

The output stage is a half bridge topology with a 2nd order filter. The filter design is a part of ICEpower's proprietary MECC topology and has been chosen as the optimal solution between demodulation characteristics, efficiency and filter compactness. The essential output characteristics are:

- The switching residual on the output primarily consists of a single frequency component at the carrier fundamental f_s .
- The system bandwidth is 120 kHz in 8Ω (SE) and 100 kHz in 8Ω (BTL).

Figure 18: SE output filter section with compensating Zobel network.

Operational Timing Diagram

The following diagram shows selected signals during power up/down (nominal mains).

Timing for changes in mains and enable levels

1. 570ms
2. 30ms
3. 200us
4. 30ms
5. Up to 2 seconds (P_{out} dependent)
6. 30ms

Over current and Thermal pins have the same response delays as the Enable pin from when the over current or thermal error is detected.

Figure 19: Timing – enable and mains.

Thermal Design

Thermal design is generally a great challenge in power amplifier systems. Linear amplifier designs operating in class A or AB are normally very inefficient and therefore equipped with extensive heat sinking to keep the transistor junction temperature low. The ICEpower125ASX2 is based on highly efficient ICEpower switching technology providing high overall efficiency characteristics at all levels of operation.

Part of the "component" philosophy of the ICEpower125ASX2 module is to provide a self-cooled component thus eliminating the need for special attention to thermal design.

The ICEpower125ASX2 module is designed for music reproduction, which means that the output power of the amplifier will never be continuous. Research has shown that the RMS level of any music signal does not normally exceed $1/8^{\text{th}}$ of the peak value and the power supply is therefore designed for large short-term power handling and lower continuous power handling. If the average output power of the ICEpower125ASX2 exceeds 65W @ 4Ω (SE-mode with both channels driven) or 70W @ 4Ω (BTL-mode) for a long time at 25°C ambient temperature, the module will reach its maximum allowable temperature and the temperature protection will be activated.

Further information about thermal design can be found in the ICEpower ASX Designer's Manual.

Physical Dimensions

All dimensions are in mm.

Figure 20: Physical dimensions in mm.

Important! A minimum clearance of 12 mm. around the module is required for safety and ventilation reasons.

Figure 21: 3D-view of the ICEpower125ASX2 board.

Safety Standards

The ICEpower125ASX2 is safety approved by CSA to ease the design-in procedure. The module complies with the following standards:

Europe: IEC 60065 7th ed.
US: UL 60065 7th ed.

Safety Class

Class 2 (without earth)

ESD Warning

ICEpower products are manufactured according to the following ESD precautions:

- IEC 61340-5-1: Protection of electronic devices from electrostatic phenomena. General Requirements.
- IEC 61340-5-2: Protection of electronic devices from electrostatic phenomena. User Guide.
- ANSI/ESD-S20.20-1999: Protection of Electrical and Electronic Parts, Assemblies and Equipment.

Further handling of the products should comply with the same standards.

The general warranty policy of Bang & Olufsen ICEpower a/s does not cover ESD damaged products due to improper handling.

Packaging and Storing

Dimensions and weight

Package	Quantity	Dimensions (w x d x h)	Gross Weight
Carton	36	390 x 420 x 294	TBD
Pallet	288	800 x 600 x 1350	TBD

ESD safe cardboard is used for wrapping.

Order Codes	Description	Part Number
ICEpower125ASX2	2x125W or 1x500W ICEpower Amplifier with integrated ICEpower Supply	8002661

Storage humidity

Do not expose the pallets to humidity levels higher than 85% or rain.

Storage temperature

The pallets are to be stored at temperatures from 0°C to 70°C.

DATASHEET
ICEpower125ASX2

Version 1.1

Stacking

Pallets may not be stacked on top of each other.

Notice

The data sheet contains specifications that may be subject to change without prior notice. ICEpower® is a trademark of Bang & Olufsen ICEpower a/s.

Bang & Olufsen ICEpower a/s products are not authorized for use as critical components in life support devices or life support systems without the express written approval of the president and general counsel of Bang & Olufsen ICEpower a/s. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labelling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
